

# The world asked for solutions to greenhouse gas emissions.

U of T asked: How many would you like?

*Professor Mohini Sain*

Faculty of Forestry and Faculty of Applied Science and Engineering

## NO OTHER CANADIAN UNIVERSITY DOES MORE RESEARCH ON CLIMATE CHANGE.

While Professor Sain investigates car parts made from plant fibres, a colleague is developing an infrared sensor that could reduce CO<sub>2</sub> emissions by the tonne. And more than 200 researchers are working on environmental issues like climate change. In fact, U of T has more researchers recognized as global leaders in more fields than any other Canadian university. That's how we're answering the world's toughest questions. And it's how we're teaching a generation of Canadians to do the same.
